

We are looking for a

Software/Database Developer (m/f)

immediate start

your job requirements:

- profound knowledge in information systems or/and a student in an IT-related field
- proficient in SQL (PostgreSQL is an advantage)
- experience/adaptability in/to various software and tools (MS office 365, Git, Jupyter, etc.)
- hands-on experience with Python is a plus
- familiarity with some of its libraries (pandas, folium, etc.) and Django framework is a plus
- creative and analytical problem-solving approach
- good organisational skills and excellent command of English
- open-minded, team-oriented, flexible, structured and motivated

your responsibilities:

- working in a distributed team
- collaboratively build and maintain core components, which transform and visualise data according to the various requirements in the company
- continuously improve and optimise the databases in order to scale and grow
- follow best practices from the field (TDD, clean code, simple design, etc.)
- support the research team with their technical needs

we offer:

- diversified work in an interesting, international environment
- friendly and team-oriented working atmosphere in a young team
- loyal, long-term employment (no hire and fire) in one of the major hospitality consulting companies worldwide
- adequate remuneration

please forward your application in English (motivation letter, CV and picture) to:
